Refactoring	<div style="width: 95%;"></div>
Optimization	<div style="width: 60%;"></div>

Work Experience

January 2013 - Present Web Application Developer, Git Evangelist

Delta Systems Group | Columbia, Missouri

Delta Systems is a full-service web development shop focusing on extending the advanced CMS capabilities of Wordpress and other in-house technologies. I am currently employed as a Web Application Developer, working with our project management team as well as directly with clients to provide custom solutions to technically complex challenges. I also lead the company-wide transition from SVN to Git as a version control system, which included transferring all repositories, conducting training sessions, and implementing workflow standards moving forward.

Summer 2012 Intern

CARFAX | Columbia, Missouri

While working at CARFAX for my summer internship, I adapted quickly to their XProgramming practices and Agile environment. As part of the Dealer support group, I shipped code daily, and contributed as a team member in the implementation of a system to interface with the California Vehicle History Database, a project which was required by a newly-introduced law as well as forecast to increase company revenue by as much as 15%.

2011 - Present Freelance

Independent | Columbia, Missouri

As an independent freelance developer, I am passionately involved with many small businesses in central Missouri. My clients include local retailers, attorneys, ecommerce-based businesses, non-profits, artists and musicians. I've worked independently across a wide variety of technologies, from Rails to iOS to WordPress, taking in to consideration factors such as target market, SEO, future compatibility and budget, and allowing me to share in their success and reinvest my time into development of the local community.

Education

May 2014

Computer Science - BA

College of Engineering, University of Missouri, Columbia, Missouri

May 2008

Certificate of French - C1

École Privée de Français pour l'International, Paris, France
